

cx402

✓ THE COMPLIANT VERSION OF X402

x402 moves money between **strangers**.

The agent-payment standard settles anonymous USDC
between unknown wallets. No identity. No provenance.
No audit trail. Unusable for anyone who answers to a
regulator.

ANONYMOUS / UNTRACEABLE / UNBANKABLE

X402 • TRANSFER

NO. ????

from 0x?? unknown

to 0x?? unknown

amount 25.00 USDC

identity — none

audit — none

status **UNVERIFIED**

We didn't reinvent x402. We made it **pass**.

A-Pass identity · **A-Token** clean funds · Travel-Rule receipt · MCP for agents

Conforms to the x402 facilitator spec. A drop-in compliance layer, not a silo.

Every payment is verified before it settles.

REQUEST → 402 → ✓ gate → SETTLE → 200

pass payer ✓ payee ✓ funds ✓ clean → settled

block payee ✗ no a-pass → blocked · reverts on-chain

CX402 · RECEIPT

NO. 402-0091

originator 0x12c4...84d3 a-pass ✓

beneficiary 0x9af0...1b6c a-pass ✓

amount 25.00 aUSDC

chain monad · 10143

travel-rule recorded

status CLEARED

The agent economy needs **clean** rails.

x402 is becoming how agents pay. cx402 is how those payments become compliant: verified parties, clean funds, auditable by design. The layer regulated agent commerce is missing.

brutaldevvin. Web3 since 2019. trader → angel → early in unicorns → builder.
Monad since early testnet. Built monscope.xyz, live Monad data + API.
